better drivers. lower risk. safer communities.

Samba DriverMonitor

Overview

SambaSafety® provides the information you need to know — guiding you to make the right decision at the right time. SambaSafety integrates individual driver data with industry-leading driver risk management software to provide you with the critical information you need to maintain a safe and qualified driver fleet. By continuously monitoring, normalizing, and scoring motor vehicle records (MVRs) and correlating other data sources, we help you identify high-risk drivers, modify behavior, reduce accidents, and ensure compliance while lowering costs — ultimately improving driver and community safety.

Driver Risk Management

Samba DriverMonitorSM is the foundation of the SambaSafety Driver Risk Management solution as it automates the way you manage your commercial and non-commercial drivers. It manages all driver data and automatically checks for new violations, DUI/DWI convictions, invalid licenses, and approaching license or medical certification expiration dates. The Samba DriverProfileSM aggregates all information for a comprehensive review of individual driver performance. Each month concise reports identify new citations and actions and alerts management to the most critical driver behavior issues.

In addition, utilizing a common coding system for violations, license status and crashes that goes beyond standard MVRs, the Samba DriverScoreSM provides a single standardized “score” to assess individual driver performance independent of each state’s point system.

Samba DriverMonitor features

- Highlights only those drivers with recent MVR activity and provides timely alerts.
- Allows designation of driver type (CDL vs. non-CDL) for various reporting and status checks such as DOT medical certifications.
- Monitors and reports on drivers by type, location, or division.
- Provides immediate access to different MVR types, where available.
- Sets policy for annual MVR purchases for your CDL drivers (manually, on date-of-hire, at a specific date, or dynamically).
- Provides effective, efficient and rapid application of driver management policies across geographic or jurisdictional boundaries.
- Schedules appropriate online driver training classes for high-risk drivers.
- Summarizes all recent driver activity into a simple, user-friendly dashboard.
- Archives reports and individual driver data in a secure database for viewing 24/7.

Driver Risk Management

Your drivers are your company's greatest assets — and greatest liabilities. In today's economy, employees are more concerned than ever about retaining their jobs. Relying on employees to notify management about a recent citation or DUI/DWI is risky business. Your ability to quickly identify new citations, unlicensed and high-risk drivers each month is your single most effective tool in reducing costly preventable crashes.
